python_字符串有时可以比较大小哦！

1、字符串纯数字

```
s='123'

t='234'

if s>t:

    print("s>t")

else:

    print("s<t")

D:\study\python\test\venv\Scripts\python.exe D:/study/python/test/dd.py

s<t
```

2、字符串数字+字母

按首字母进行比大小

```
s='a123'

t='b23'

if s>t:

    print("s>t")

else:

    print("s<t")

D:\study\python\test\venv\Scripts\python.exe D:/study/python/test/dd.py

s<t
```

```
s='c123'

t='b23'

if s>t:

    print("s>t")

else:

    print("s<t")
```

D:\study\python\test\venv\Scripts\python.exe D:/study/python/test/dd.py

s>t

3、字符串字母

```
s='cddd'

t='bggg'

if s>t:

    print("s>t")

else:

    print("s<t")
```

D:\study\python\test\venv\Scripts\python.exe D:/study/python/test/dd.py

s>t
